Computing ODDS (Logistic Regression)

$$\#P = 0.40$$
 $I-P = 0.60$

$$odds = \frac{P}{I-P} = \frac{0.40}{0.60} = \frac{2}{3}$$

odds =
$$\frac{P}{1-P} = \frac{0.60}{0.40} = \frac{3}{2} = 1.5$$

$$P = 0.70$$
 $1-P = 0.30$

$$odds = \frac{P}{1-P} = \frac{0.70}{0.30} = \frac{2.33}{0.30}$$

$$odds = \frac{0.80}{0.20} = \frac{4}{}$$

$$P = 0.90$$
 $1-P = 0.10$

$$odds = \frac{0.90}{0.10} = 9$$
