Factorials and Binomial Coefficients

Factorials

- The normal probability plot is a graphical technique for assessing whether or not a data set is approximately normally distributed.

- The data are plotted against a theoretical normal distribution in such a way that the points should form an approximate straight line.

- Departures from this straight line indicate departures from normality.

- The relevant R functions are qqnorm() and qqline().

Factorials and Binomial Coefficients

Binomial Coefficients

- The normal probability plot is a graphical technique for assessing whether or not a data set is approximately normally distributed.

- The data are plotted against a theoretical normal distribution in such a way that the points should form an approximate straight line.

- Departures from this straight line indicate departures from normality.
